Batch Number: 2018_CSE_08

Instructor's Name : Mrs. Ashwini

Smart Garbage Management System

14 February 2019

<div align="center">Session 1</div>

In this session we created a GitHub account and a Blog page

GitHub

In this Session progress we successfully have created a GitHub account and a repository which gives update of this week.

Our GitHub account goes on with the name SWMSystem and the weekly updates are being updated on our Repository and the link is as follows https://github.com/SWMsystem .

Blogger

We have created a blog page by name Smart Garbage Management System with the link https://swms4.blogspot.com which give the detail description of our work on that particular week and our progress.

Regarding Project Requirement analysis we got to know about the components and the uses.

Required components : IR sensor's, Ultrasonic Sensor's, Arduino UNO, Bread-Board, GSM module.

In further classes we are going to understand about the components mentioned above.
